max(an_yr)	2014
count_an_yr	26

- Summer temperature data for 2015 in relation to historical temperature metrics.
- Trend in the yearly frequency of summer warm events;
- Amplitude and duration of warm water events in 2015. Thresholds for warm events are defined by  $T_{min} \geq 20^{\circ}\text{C}$  and  $T_{max} \geq 25^{\circ}\text{C}$ . The most stressful events occur when  $T_{max} \geq 25^{\circ}\text{C}$  is observed simultaneously with  $T_{min} \geq 20^{\circ}\text{C}$ .
